DETAILED ACTION

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The title is too broad and is required to be redefined .

Claims 5 –8 are objected to because of the following informalities: Claim 5 appears to be redundant with claim 6. . Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-16 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by either Horinouchi or May. Note that both patents teach a programmable oven having an initial cooking stage followed by a subsequent cooking stage, a display, a memory and a user interface. In Horinouchi the subsequent stage is determined by food parameters such as quantity. In May the subsequent stage is determined by modification of a cooking sequence, which can be recalled from the oven memory. As per the dependent claims both the applied patents teach mode, temperature and time modifications.

\Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Horinouchi or May et al. The claims call for a 100 percent duty cycle during preheats, which the applied patents do not specify. However, the artisan would have found it an obvious choice to vary the duty cycle to any value as long as current limitations are recognized which would lead to damage of the unit. As per claim 20 use

of a lock out feature is commonly found on programmable devices, such as use of a pin or security code to prevent unauthorized use, e-mail etc.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Abrams et al, Hirata et al. And petty et al are cited for disclosing pertinent recipe oven controllers.
